

Bengal Cattle 5-Year Dataset

Comprehensive report on cow_master_dataset.csv | s3://cid-mbs/cow-data-v2/
Graaho Technologies | Prepared: May 2026 | 2,272 records | 2021 – 2025

About the Dataset

The **Bengal Cattle 5-Year Master Dataset** aggregates livestock records collected by **Graaho Technologies** across five consecutive years (2021–2025) from Bengal Meat's digital cattle marketplace. Each record represents a single animal listed for sale, capturing rich physical, commercial, and health attributes alongside multimedia assets (images and YouTube videos). The dataset was assembled from per-year pickle exports, merged into a single CSV with standardised columns, and archived on **Amazon S3** (**s3://cid-mbs/cow-data-v2/**) under the Glacier Instant Retrieval storage class for cost-efficient long-term access. It serves as the primary training and evaluation corpus for the **Cow Weight & Breed Prediction** AI project.

Column Schema & Data Dictionary

Column	Type	Description
year	str	4-digit harvest year (2021–2025)
id	UUID	Unique record identifier
sku / sku_normalized	str	Cattle code e.g. BLF2340 (normalised: no spaces)
type	cat	BULL / HEIFER / STEER
sex	cat	MALE_BULL · FEMALE_HEIFER · MALE_STEER
color	cat	Coat colour: RED · NON_RED · CROSS_RED
breed	cat	8 breeds — LOCAL dominant (80.8%)

Column	Type	Description
age_in_month	str	Textual age e.g. "2 Years"; parsed to age_months (numeric)
weight_in_kg	float	Live weight; range 0 – 826 kg, avg 251.3 kg
height_in_inch	float	Withers height in inches
price	float	Listing price in BDT; median 139,000
sale_offer_%	float	Discount percentage on listed price
feedlot_in_month	str	Duration in feedlot e.g. "3 Months"; parsed to feedlot_months
teeth	int	Dental eruption count (proxy for age)
feed	list	Serialised list of feed types provided
is_dewormed	bool	99.9% True across all records
is_fmd_vaccinated	bool	Foot-and-Mouth Disease vaccination status (99.9%)
is_anthrax_vaccinated	bool	Anthrax vaccination status (99.9%)
is_lumpy_skin_disease	bool	Lumpy Skin Disease flag (99.8%)
thumbnail	url	CDN URL of the primary image (thumbnail)
slides / image_cdn_urls	url list	All CDN image URLs for the listing
local_image_paths	paths	Relative paths: data-{yr}/images/{sku}/{sku}_0-3.jpg
s3_image_paths	S3 URIs	s3://cid-mbs/cow-data-v2/data-{yr}/images/...
youtube_slug	str	YouTube video ID (99.6% present)
youtube_url	url	Full https://youtube.com/watch?v=... link
local_yt_video_path	path	Relative path to downloaded MP4
s3_yt_video_path	S3 URI	s3://cid-mbs/cow-data-v2/data-{yr}/yt_videos/...
status	cat	AVAILABLE (63.7%) · ORDERED (34.3%) · other
created_at	dt	Listing creation timestamp with timezone

Key Insights & Notes

- 1

Breed concentration: LOCAL breed dominates at 80.8% (1,835 records). SAHIWAL (8.5%) and HOSTINE_CROSS (5.2%) are the next most represented, reflecting the commercial cattle market in Bangladesh.
- 2

Sex skew: 99.6% of all listed cattle are MALE_BULL, indicating this dataset primarily covers beef-market animals rather than dairy.
- 3

Price trend: Median listing price rose from BDT 101,000 (2021) to a peak of BDT 160,000 (2023), dipped in 2024, then recovered to 156,000 in 2025 — a 54% rise over 5 years.
- 4

Weight anomaly in 2024: Average weight drops sharply to 152 kg vs the 254–295 kg range in other years. This likely reflects a different collection methodology or a batch of younger cattle in that year's dataset.
- 5

Near-perfect health coverage: 99.9% of animals are recorded as dewormed and vaccinated against FMD and Anthrax, suggesting systematic health compliance across all supplier farms.
- 6

Rich multimedia: 99.6% of records have a YouTube video and each has 4 angles of JPEG images, making it well-suited for computer vision and multimodal ML tasks.
